CONNECTING WITH A CHROMEBOOK REMOTELY

When using a Board-Owned Chromebook beyond the reach of District Wi-Fi, you'll need to connect an alternate Internet source and use GlobalProtect VPN to tunnel back in to The District's network.

If you attempt to browse the Internet without first establishing a GlobalProtect connection, you will receive the following message in your browser window and will be unable browse:

Please Enable Global Protect to browse the internet

Get The ChromeBook Global Protect Client Here

Please follow the steps below to establish an Internet connection on the Chromebook from a remote location:

1. Connect the Chromebook to the Internet (Wi-Fi).
2. Login to the Chromebook.
3. Click the GlobalProtect icon pinned to the shelf to initialize the VPN client.
   The icon looks like this:

4. Once this window appears, the VPN client is initialized. Proceed to the next step to establish a connection.
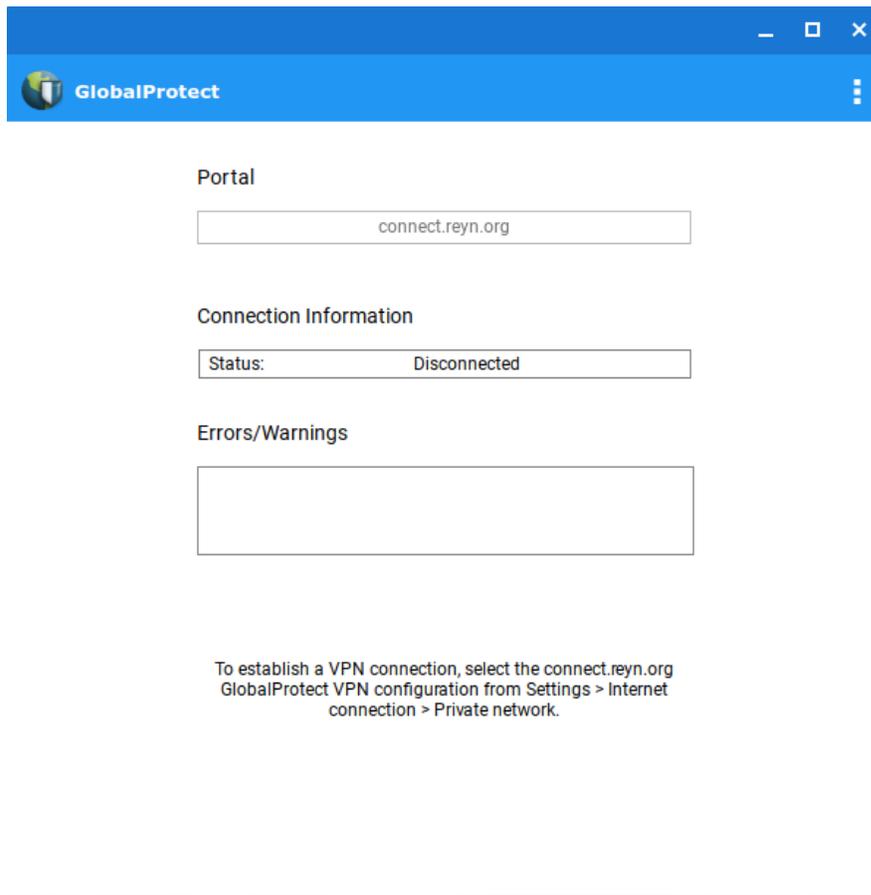

5. Click the network settings icon to bring up the pop-up menu and then click **VPN Off**.
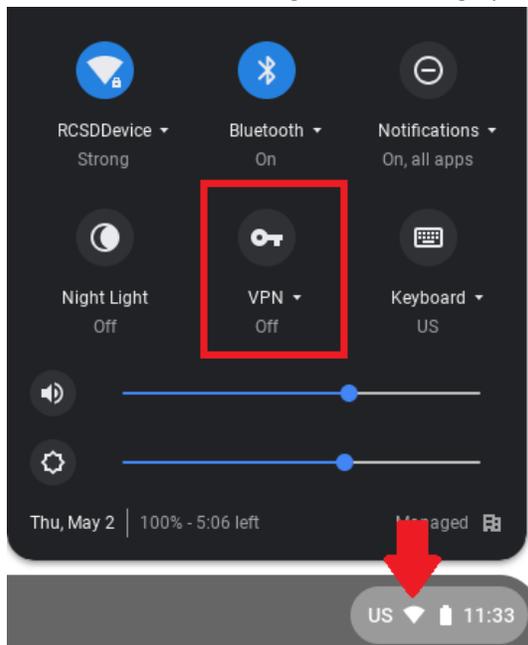

Click connect.reyn.org.
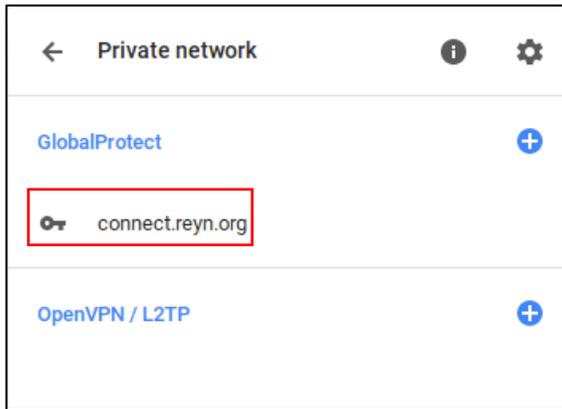

6. Enter your username and password. Click the [Connect] button. Tip: the username will be the part of your email address before @reyn.org. You will login with the same password used for authenticating to the District email system.

7. You are now connected. When finished working on the Chromebook, click the [Disconnect] button and close the window.
